

## MTSA Technopower reference Disassembly HTU Unit

A technical institute has, in the scope of a research program into CO<sub>2</sub> neutral energy sources, conducted an investigation regarding the conversion of biomass such as roadside grass to useful fuels like oil and gas. The depicted HTU pilot plant was used for this investigation. After the investigation was completed, the area had to be made available for a new project. The HTU installation had to be disassembled, cleaned and stored for re-use. MTSA Technopower was hired to disassemble, clean and store the installation in such way that it can be re-assembled easily.
